Android 10+

Introduction

ZKEasyGo APP is a debugging tool designed to connect ZKTeco Parking Barrier and Turnstile products through Bluetooth communication (BLE 5.2).

Currently, ZKEasyGo is tailored to meet the needs of project installers, offering comprehensive support for the integration and configuration of ZKTeco's BGM series barriers and Comet series speed gates. However, our development team is actively working to expand the app's compatibility, with plans to integrate additional equipment types in the near future.

Our primary goal is to provide an exceptional user experience during the installation and operation of ZKTeco's access control solutions. This will reduce the related manpower, material and time costs. We also aim to provide customers with a convenient and worry-free experience when using our products.

Function

- For optimal performance, use the ZKEasyGo APP with turnstile devices.
- Communication via Bluetooth 5.2 connection
- Quick on-site configuration for faster project delivery
- RGB status indicator effect interaction

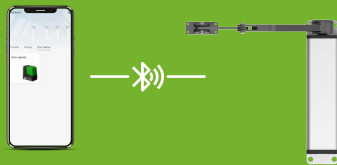

- ZKEasyGo APP provides easier operation of barrier gate devices
- Supports one-click parameter configuration and restore
- APP can be connected for firmware upgrade
- Supports large capacity remote control configuration

In the future, ZKEasyGo APP will integrate more products for more solution, and through the powerful performance of the APP, professional debugging personnel can further simplify the debugging operation of the devices.

Application Configuration
